Disclaimer

Statements contained in this presentation which are not historical facts are forward-looking statements that involve risks, uncertainties and other factors that could cause actual results to differ materially from those expressed or implied by such forward-looking statements. Factors that could cause such differences, without limiting the generality of the following, include: risks inherent in exploration activities; volatility and sensitivity to market prices for uranium; volatility and sensitivity to capital market fluctuations; the impact of exploration competition; the ability to raise funds through private or public equity financings; imprecision in resource and reserve estimates; environmental and safety risks including increased regulatory burdens; unexpected geological or hydrological conditions; a possible deterioration in political support for nuclear energy; changes in government regulations and policies, including trade laws and policies; demand for nuclear power; failure to obtain necessary permits and approvals from government authorities; weather and other natural phenomena; and other exploration, development, operating, financial market and regulatory risks. Although Uranium Energy Corp believes that the assumptions inherent in the forward-looking statements are reasonable, undue reliance should not be placed on these statements, which only apply as of the date of this release. Uranium Energy Corp. disclaims any intention or obligation to update or revise any forward-looking statement, whether as a result of new information, future event or otherwise.’

Notice to U.S. Investors: The mineral resources referred to herein have been estimated in accordance with the definition standards on mineral resources of the Canadian Institute of Mining, Metallurgy and Petroleum referred to in NI 43-101 and are not compliant with U.S. Securities and Exchange Commission (the “SEC”) Industry Guide 7 guidelines. In addition, measured mineral resources, indicated mineral resources and inferred mineral resources, while recognized and required by Canadian regulations, are not defined terms under SEC Industry Guide 7 and are normally not permitted to be used in reports and registration statements filed with the SEC. Accordingly, we have not reported them in the United States. Investors are cautioned not to assume that any part or all of the mineral resources in these categories will ever be converted into mineral reserves. These terms have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. In particular, it should be noted that mineral resources which are not mineral reserves do not have demonstrated economic viability. It cannot be assumed that all or any part of measured mineral resources, indicated mineral resources or inferred mineral resources will ever be upgraded to a higher category. In accordance with Canadian rules, estimates of inferred mineral resources cannot form the basis of feasibility or other economic studies. Investors are cautioned not to assume that any part of the reported measured mineral resources, indicated mineral resources or inferred mineral resources referred to herein are economically or legally mineable.

Exploration Target Disclosure: In the Company’s subject technical report all tonnages, grade, and contained pounds of uranium should not be construed to reflect a calculated mineral resource (inferred, indicated, or measured). The potential quantities and grades, as stated in the technical report, are conceptual in nature and there has been insufficient work to date to define a NI 43-101 compliant resource. Furthermore, it is uncertain if additional exploration will result in the discovery of an economic mineral resource on the project.
Licensed Low-Cost U.S. ISR Projects

Operational Infrastructure – Ready to Ramp Up

U.S. Production Profile 4M lbs./yr

Aggressively Expanded Project Portfolio Through Acquisitions During the Downturn

Largest U.S. Resource Base of Fully Permitted ISR Projects in Texas and Wyoming of any U.S. Based Producer
Reactor Demand Significantly Exceeds Primary Production

Spot Prices Below Production Costs and Hedges Falling Off

2020 Demand expected = 182M lbs.
2020 Production was expected @ 142M lbs., 12M lbs./mo pre COVID19
54% of Total monthly global production impacted by COVID19
2020 Production is now expected to be 61M lbs. below requirements
Cumulative Gap is 310M lbs. by 2026

Supply/demand numbers will be impacted as a result of the COVID-19 pandemic. As of April 17, mine shutdowns included Cigar Lake + McLean Mill, Kazatomprom, Rossing, Husab, and Moab Khotsong, that will reduce supply by about -6.4 M lbs./mo. As of August 1st, some restart dates have been announced, but are not firm. To date, total supply reduction for 2020 is ~21M lbs. Reactor demand appears to have had minimal impact.

$1.5 Billion for a U.S. Uranium Reserve in Trump’s FY2021 Budget

U.S. Is The World’s Largest Consumer of Uranium

Secretary of State Mike Pompeo said:

"We need to fundamentally review our supply chains and make sure that we know those supply chains and have control over them for moments just like this."

Further, with respect to uranium, he stated that

“We've got to get back our mining, processing, enriching cycle”

Projected 2020
U.S. Demand: ~50M lbs.
U.S. Production: ~0
Immediate & Bold Actions to Strengthen U.S. Uranium Mining

• DOE Initiating a competitive procurement process for establishing a Uranium Reserve program within the next year. Program plans purchasing U.S. mined U3O8 over next 10 years

• DOE will end the uranium bartering program

• Streamline regulatory reform and land access for uranium extraction

• DOC working to extend the Russian Suspension Agreement to protect against future uranium dumping in the U.S. market

• Open new markets for exports of U.S. civil nuclear technology, materials and fuel
Diversified Asset Portfolio
Low-Cost ISR & Production Ready

58M lbs. Measured & Indicated
45M lbs. Inferred U₃O₈

Strategic Equity Interest

Largest shareholder in Uranium Royalty Corp
(Pre-IPO)
The only pure play uranium royalty and streaming company and major shareholder in Yellow Cake plc

Please refer to a detailed breakdown of NI 43-101 resources and disclaimer in this presentation
Please refer to technical reports on SEDAR and Company’s website for a detailed breakdown of NI 43-101 resources and disclaimer.
Our Team

Amir Adnani
President, CEO, Director
An entrepreneur, founding CEO of UEC, founder and Chairman of GoldMining Inc., with extensive experience building natural resource companies.

Robert Underdown
VP of Production
Has held senior operational positions at ISR uranium mines in Texas for over 35 years.

Spencer Abraham
Chairman, Board of Directors
Served as a U.S. Senator from 1995 to 2001, as Secretary of Energy from 2001 to 2005 and previously as non-executive Chairman of Areva’s U.S. board.

Scott Melbye
Executive Vice President
35 years of experience in senior roles with uranium majors, Cameco, Uranium One, and Kazatomprom. Former President of Uranium Producers of America and Chair of the World Nuclear Fuel Market.

Clyde Yancey
VP of Exploration
Over 35 years of experience in uranium exploration in North and South America.

Andy Kurrus
VP of Resource Development
Over 30 years experience with uranium exploration in the United States.

(4) No principal repayments until maturity on January 31, 2022
Hub & Spoke Production Strategy

[Diagram showing locations in South Texas with labels for Hobson, Goliad, Salvo, Burke Hollow, Longhorn, Palangana, and Corpus Christi.]
Hobson is fully licensed and permitted.

The Processing Plant has a 2M lbs. / year physical capacity.
Palangana ISR Mine
First Producing Mine
Proof of Concept

$10M Initial CAPEX
6 months construction timeline

Production Ready
- Low cash-cost of $21.77/lb during operation
- Fully permitted including expanded mine permit
- Received 10-year renewal permits in 2019

Similar Costs for Future Projects
- The major permits for production have been issued for Goliad and Burke Hollow

Similar Costs for Future Projects
- The major permits for production have been issued for Goliad and Burke Hollow
In-Situ Recovery (ISR) Technology
Low Cost & Environmentally Friendly
Resin Hauling Truck And Trailer
Burke Hollow ISR Project Growth Ahead

- Discovery of six trends since 2012
- 7.09M lbs. in 4.06Mt grading 0.088% U3O8
- Leach amenability testing indicates recovery greater than 90%
- ~20,000 acres located ~50 miles from Hobson Processing Plant.
- 50% of the property unexplored

*See news release dated Nov 5, 2019 and refer to a detailed breakdown of NI 43-101 resources and disclaimer on slide 2.
Burke Hollow
Advancing Towards Uranium Extraction

The following final permits have been issued:

✓ Mine Production Area
✓ Two Class I disposal wells
✓ Aquifer Exemption
✓ Radioactive Materials License*

2019 Drilling Discovers Additional Mineralization in Production Area 1

✓ 72 monitor wells installed
✓ Enlarged the Production Area 1 (PA-1) zone

Next Step: Complete the expanded PA-1 delineation drilling and monitor well installation in 2020.

*See news releases dated Nov 5, 2019 and Feb 20, 2019. Please refer to a detailed breakdown of NI 43-101 resources and see disclaimer on slide 2.
Reno Creek
ISR Project

The **largest permitted, pre-construction** ISR uranium project in the U.S.

Strategic Location within the Heart of the **Powder River Basin, Wyoming**

Received a modified Permit to Construct in 2019, allowing the construction of the Central Processing Plant (CPP) and ISR wellfields.
Reno Creek ISR Project
Pre-Feasibility Study Underway

M&I Resource 26M lbs. of U3O8 grading 0.041% within 32Mt*

Inferred Resource 1.49M lbs. of U3O8 grading 0.039% within 1.92Mt*

First time since 1980 that the major mineralized trends have been consolidated

Considerable ISR exploration and expansion potential

Production permits in place

* See news release dated January 15, 2019. Please refer to a detailed breakdown of NI 43-101 resources and see disclaimer on slide 2.
Reno Creek: Project Timeline

- **2012**
  - June 2012: Exploration success discovers new Southwest Reno
  - Oct. 2012: Boundary agreement signed with Uranerz
  - July 2012: Repurchase of 5% Gross Production Royalty from Strathmore

- **2013**
  - July 2013: Permit to Mine/DDW

- **2014**
  - May 2014: PFS released
  - Nov. 2015: EPA approval for Aquifer Exemption Permit

- **2015**
  - July 2015: Updated resource to current 22M lbs.
  - Sept. 2015: New NI 43-101 Resources

- **2016**
  - Feb. 2017: NRC Source Materials License received
  - May 2018: UEC Completes the Acquisition of the North Reno Creek Project

- **2017**
  - Aug 2017: UEC Closes Acquisition of the Fully Licensed Reno Creek Project

- **2018**
  - Jan 2018: Received a modified Permit to Construct in 2019,
  - **2019**: allowing a move forward with construction of the CPP and ISR wellfields

- **2020**

* See news release dated January 15, 2019. Please refer to a detailed breakdown of NI 43-101 resources and see disclaimer on slide 2.
Anderson Project - Arizona

A Large U.S. Resource

NI 43-101 compliant resource*:

- **Indicated Resource**: 29.5Mt, 17M lbs. avg. grade of 0.029%
- **Inferred Resource**: 14.3Mt, 12M lbs. with avg. grade of 0.046%

9,852 Acres

Project located ~75 miles northwest of Phoenix, AZ

History

Between 1955-1958 with ~$40M spent by previous operators, including Urangesellschaft

Extensive Work

Feasibility studies, milling studies, and hydrological reports previously completed by third parties

*NI 43-101 Technical Report completed and available on SEDAR and see disclaimer on slide 2
Slick Rock Project - Colorado

**Technical Report**

- **NI 43-101 Compliant Resource***:
  - **Inferred Resource**: 2.5Mt, 11.6M lbs. avg. grade of 0.228%
  - **Inferred Resource**: 2.5Mt, 69.6M lbs. vanadium with avg. grade of 1.37%

**Low CAPEX**

- $21M initial CAPEX with an annual production of 438,000 pounds U3O8 + vanadium inferred

**Vanadium Resource**

- Resource of 2.549Mt grading 1.37% V2O5 and containing 69.6M lbs.

**Nearby Infrastructure**

- Projected sale of mined product to the White Mesa mill in nearby Blanding, UT

---

*NI 43-101 Technical Report completed and available on SEDAR and see the Company’s disclaimer*
ISR District Opportunity in **Paraguay**

Similar geology as South Texas and leveraging ~$50M of historic exploration work by Anschutz and Cameco, including new work completed by UEC.

Alto Paraná Titanium Project

Project Overview

- One of the highest-grade and largest-known Ferro-Titanium deposits in the world
- NI 43-101 compliant resource with a mineral exploration claim of 70,498 hectares
- PEA study initiated in 2019 with 500 m drill campaign scheduled to complete in 2020
- Follow-up activities include laboratory analyses and new resource estimation

### Project History

- **2008** Deposit discovered
- **March 2012** MINTEK Smelter Test producing Hi-TiO₂ slag
- **May 2015** NI 43-101 Technical Report issued
- **July 2017** UEC issued revised NI 43-101 Mineral Resource Estimate
- **2011-2012** Production of HMC from pilot plant
- **April 2012** Technical report & PEA completed
- **March 2016** Property optioned by UEC
- **2019-20** PEA study underway

*NI 43-101 Technical Report completed and available on SEDAR and see disclaimer on slide 2*
Titanium Feedstock Market – TiO2 prices hitting 3-year highs

- 90% of TiO2 feedstocks (ilmenite) used for pigment manufacturing
- Strong price recovery for ilmenite since 2017, with positive outlook, driven by:
  - Strong pigment demand & balanced inventory levels
  - Environmental and yield advantages of high-grade feedstock
  - High-grade feedstock supply deficit

Good fit for Alto Parana – capable of producing high-grade TiO2 feedstock for both sulfate or chloride slag production
Investment Summary

- Fully permitted and state of the art infrastructure advantage with Hobson Processing Plant

- Pipeline of fully licensed, low-cost ISR projects – potential production profile of 4M lbs./year in Texas and Wyoming

- U.S. projects can provide supply under Trump’s NFWG strategy, including $1.5B Uranium Reserve program starting within the next year

- Advancing production-readiness at Reno Creek and Burke Hollow ISR projects

- Market fundamentals continue to improve with a growing deficit between primary production and reactor requirements
Nuclear Energy Saves Lives – Improves Quality of Life

Nuclear is the safest way to make reliable electricity and has saved over 3 million lives that would have been lost prematurely to deadly air pollution from energy alternatives.

https://www.nextbigfuture.com/2019/01/nuclear-power-has-saved-3-4-million-lives.html
Germany’s “Energiewende” “Failed Energy Policy”

160 Billion Euro Investment in “Green Energy” has resulted in:

- Zero Progress in Reducing Carbon Emissions
- Expensive Electricity – 50% higher than Nuclear France
- Reduced Reserve Margins – Reliability Issues
- Reliance on dirty lignite Coal and Russian Gas
- Competitive disadvantage for German Industry
- Loss of confidence in German Government

Translation “A botched job in Germany”

France Gets 72% of its Electricity from Nuclear Power

**THEY ENJOY:**
- Per kW carbon emissions 1/10 that of Germany
- Electricity rates 1/2 that of Germany
- Clean air with abundant and affordable energy

Policies to reduce nuclear reliance overturned. Smart move in light of “Yellow Vest” outrage on gas tax.
Nuclear Power Growth Remains Robust
More than 9% since 2012

439 Operable Reactors Worldwide
48 Reactors Connected in 7 Years
56 Units Under Construction

- China announced that it is likely to triple nuclear power capacity by 2030
- India plans for 21 new nuclear reactors by 2031
- U.A.E. completing construction on 4 units
- U.K. upgrading nuclear fleet to new advanced reactors
- Russia is building 36 reactors in China, India, Bangladesh, Turkey, Egypt, Iran, Finland, Belarus, Slovakia, Armenia, Uzbekistan and Hungary
- U.S. is completing two new AP-1000 reactors in Georgia
Small Modular Reactor (SMR)  
An Important Emerging Market

- SMR global market: 65-85 GWe by 2035 – small scalable reactors:
  - Size: 5 up to 300 MWe
  - Simpler design - lower capital and operating cost
  - Cost competitive with natural gas
- Western U.S. utilities planning for 12 of the NuScale Power SMRs to be in commercial operation by 2025
Need for New Production – Beyond Existing Mines

Trade Tech’s “Market Appetite” for New Production

Inventory Overhang Drawing Down

Uranium Price Too Low to Stimulate New Production Within the Permitting and Development Lead Times to Bring On New Mines

- All assumptions are consistent with TradeTech’s latest proprietary assumptions, August 2019 (i.e. Q2 2019);
- Established Production Base shown is weighted to assimilate the challenge of existing operations remaining at full capacity over Life-of-Mine.
Utility Procurement Cycle:
Old Contracts Rolling Off...New Contracts Need to be Signed

Utility Uncommitted Demand

Historic Long Term Contracting

Source: UxC Market Outlook Q2 2020
Global Cost Curve – Most U.S. Production is ISR

Source: TradeTech
Overdependence on Foreign Supplies

“The Department of Energy is working to end U.S. reliance on Russia for nuclear fuel, plans to begin processing U.S. uranium as early as next year”

Secretary Dan Brouillette

Million lbs U308

Imports as % of Production

Source: U.S. EIA- July 2020 Monthly Energy Review – Uranium overview – Table 8.2

URANIUM ENERGY CORP | NYSE AMERICAN: UEC | URANIUMENERGY.COM
Bottom Line - Positive Market Outlook

- **Demand Growth** – 48 reactors added to grid in past 7 years. Global nuclear energy growth > 9% since 2012 - generation has recovered to pre-Fukushima levels. IEA sees future installed nuclear capacity growth of over 15% to 2040

- **Underinvestment and Supply Cutbacks** – Kazakhs, Cameco, Orano, and others, resulting in significant primary supply deficit. Mine depletions are increasing

- **Lead Time to Advance Large New Mines** can be 7 to 10 years (or longer), approx. $60/lb + incentive price

- **Accelerated Market Re-Balancing** – Growing primary production shortfall exists. COVID-19 is accelerating rebalancing: about a -6.4M lbs./mo impact

- **Utility Procurement Cycle Looming** – “New” fundamentals have not been tested

- **Speculative Interest in Physical** – Throwing “gasoline on the fire”

- **Upward Volatility in Uranium Price is Inevitable** – despite pullbacks

- **The NFWG announced strategy to purchase 17-19M lbs. U.S. mined U3O8 starting within the next year**
